

# Smart Placement and Internship Management System

## Abstract

The Smart Placement and Internship Management System (SPIMS) is a centralized, web-based application designed to modernize and streamline the recruitment lifecycle within educational institutions. The system addresses common challenges such as data inconsistency, delayed communication, and administrative complexity by providing a secure, role-based digital platform for Administrators, Students, and Recruiters.

The major objectives and functionalities of the system are outlined below:

- To provide a centralized platform for managing placement and internship activities efficiently.
- To support role-based access control, ensuring secure and structured interaction among different users.
- To automate core processes such as student registration, eligibility verification, and job/internship postings.
- To implement automated eligibility filtering based on predefined academic criteria such as CGPA, department, and backlog constraints.
- To enhance process transparency and accuracy by allowing only eligible candidates to apply for specific opportunities.
- To provide real-time notifications regarding interview schedules, application status, and selection results.
- To organize all placement-related data into a structured digital ecosystem, enabling faster decision-making and improved outcomes for students and institutions.

## Main Features

The system is divided into the following primary modules, each with clearly defined responsibilities:

### 1. Administrator Module (Control Hub)

- User management for authorizing and maintaining student and recruiter accounts.
- Placement and internship drive creation, scheduling, and monitoring.
- Definition and enforcement of automated eligibility criteria.
- Generation of analytical reports on placement statistics and student performance.
- Uploading and sharing of preparation resources and placement-related materials.

## **2. Student Module (Career Dashboard)**

- Creation and maintenance of digital academic profiles and resumes.
- Automatic matching of eligible placement and internship opportunities.
- One-click application process for multiple companies.
- Real-time tracking of application status.
- Personalized interview and assessment schedules.

## **3. Recruiter/Company Module (Hiring Portal)**

- Posting of internship and job openings with detailed eligibility requirements.
- Access to filtered lists of eligible candidates.
- Resume viewing and bulk download functionality.
- Direct updating of selection results.
- Communication with shortlisted candidates through the system.

## **4. Smart System-Wide Features**

- Real-time alerts and notifications for new postings, deadlines, and results.
- Secure data handling using role-based access control (RBAC).
- Advanced search and filtering options for students, companies, and opportunities.

## **Team Members**

1. Patrick Davis Jerry - 25MCA045
2. R Pranav - 25MCA046
3. Rahmathul Sana - 25MCA047
4. Roopak M - 25MCA048

## **Team Roles & Responsibilities**

### **Patrick Davis Jerry : Frontend Development**

**Primary Tech:** HTML, CSS, JavaScript.

**Responsibilities:**

- Designing user interfaces for student, admin, and recruiter modules.
- Creating responsive web pages and layouts.
- Implementing client-side validations and UI interactions.

### **R Pranav : Backend Development**

**Primary Tech:** PHP, MySQL.

**Responsibilities:**

- Implementing server-side application logic.
- Handling authentication and role-based access control.
- Managing placement, internship, and eligibility processing logic.

### **Rahmathul Sana : Database & Backend Support**

**Primary Tech:** MySQL, PHP.

**Responsibilities:**

- Designing and maintaining database tables and relationships.
- Writing SQL queries for data retrieval and updates.
- Supporting backend data validation and integrity.

### **Roopak M : Frontend & Testing Primary**

**Tech:** HTML, CSS, JavaScript.

**Responsibilities:**

- Assisting in frontend development and UI improvements.
- Performing system testing and bug identification.
- Verifying application workflows and usability.
